

RELATIONS, EXPERTISE
AND TECHNOLOGY
FOR SUSTAINABLE GROWTH

ENVIRONMENTAL MANAGEMENT IN PRACTICE

Few processes are as important for the environment as how we treat waste and wastewater. And few factors are as decisive for health and survival as access to clean, life-giving water. This applies to individuals, society and industry.

What we are talking about is quite simply environmental management in practice, a business that requires knowledge in a wide range of disciplines; everything from chemistry and biology to construction contracts and conventional mechanical engineering.

Läckeby Water Group is a leading know-how company in water treatment and the innovative treatment of biological waste. We can play a decisive role as a partner involved in making plants, processes and products more fit for purpose. Environmental technology thereby becomes a tool in our common striving to secure long-term, sustainable growth.

WE KEEP OUR PROMISES

Läckeby Water Group is a technology-driven company. We are driven by desires for even better designs that last longer and make operation and maintenance even simpler and cheaper: optimal solutions for each specific project.

Effective working methods

One way to reach the objective is to invest in IT support in order to secure quality, functionality and customisation for the realities of customers' everyday work. Läckeby Water Group therefore uses the best available technologies for design, calculations and management of complex projects.

In achieving a successful outcome, the people that use the technology are, of course, just as important as the technology itself. Outwardly, a treatment plant appears to be a quite simple design that separates water and pollutants. However, what distinguishes an optimised plant from all the others is how well you can adapt processes, equipment and methods to the unique conditions that apply in a particular case.

Relations that last for decades

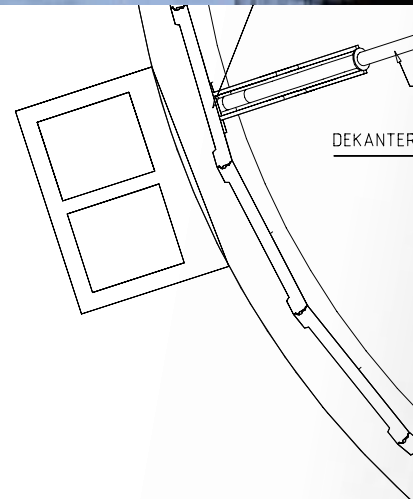

How is this achieved? Well, primarily it is due to a capability to listen to experiences and suggestions and then design, build, adapt and maintain the plants and products that are needed to enable customers and business partners to fulfil their tasks and visions. That is why relations are so fundamental to our success. And why they last.

Technological innovation is just a means to an end.

Läckeby Water Group has been active in the sector since 1935 and has a rich bank of expertise and personal know-how on plants. We know which parameters are most important, how they affect each other – and have seen what can happen if you have not done your homework.

Developed to meet environmental legislation

We are also being driven forward by environmental legislation. Internationally this gives us an advantage, as environmental legislation is often developed first where we have our origins. When other countries follow, we have already had time to develop and test new methods and designs.

FROM PRODUCT TO PROCESSES

We meet market needs with three brands: Purac for contracting business, Läckeby Products for our key products, and Läckeby for our local service organisation. With this set up, we can offer unique total involvement in everything from product deliveries to turnkey treatment plants for both public sector operations and industry. Everything is connected, like the links of a chain.

Optimised plants are based on adaptation of reliable products, which enhance the efficiency of service and maintenance, provide smooth-running plants, etc.

World-class contracts

Purac offers contracting for customers worldwide. We design and build treatment plants for wastewater, drinking water and process water, as well as plants for biogas production and gas treatment. To date, we have completed more than 4,000 contracts in 67 countries worldwide, primarily in Europe and Asia.

The contracting business unifies our know-how on processes, design and contracting with our internally-developed and licensed technologies for increased efficiency and more economical operation. There are, for example, methods that make it possible to reduce floor-space needs and operating costs by up to 50 per cent.

Control of key products

Optimal solutions require control of key products. Läckeby Products therefore offers a selection of the most important products for functionality, operational costs and operational reliability in all types of plants.

The range covers both internally-developed and licensed products. Läckeby Products pursues its own design, development and production activities. We also have the know-how and experience required to make already innovative designs work in reality, under the conditions that always vary between different plants.

Local service

In local markets, Läckeby offers service and maintenance of customers' plants. The service concept ensures operational reliability and economical running and is based on close proximity to customers, years of local experience and extensive knowledge on the plants in question. Our experienced service technicians are supported by an expert technical team. As a contractor, Läckeby can also offer the added value that stems from the exchange of experience between plants.

Plants that keep our promises

Läckeby Water Group is an independent, privately-owned Swedish group, which offers contracting, products and servicing for water treatment and biogas production. We are established on three continents and have to date completed contracts in 67 countries worldwide.

With sales of around USD 70 million, Läckeby Water Group is a leading company in its field.
