

## Environmental Policy

Clean water is a condition for the survival of mankind on earth.

Our environmental work shall apply throughout the company with all its activities and comprise all members of the staff. The environmental work shall, by continuous development, lead to new and improved treatment methods and technologies, enabling us to meet the demands of the market and the authorities. In the first place, the work is focused on municipal and industrial water and wastewater treatment and biogas production.

We shall follow the environmental legislation and other demands which are relevant to the company.

The customers purchasing our services shall be benefited by our environmental philosophy. Together with our suppliers, we endeavor to offer an increasing share of material congenial to the environment, as well as improved recovery of energy and resources.

The environmental influence throughout the life of the product shall be taken into consideration in the design, choice of material, transports, production, waste disposal, operation and maintenance.

The activities shall be carried on so as to optimize material and energy consumption.

Our staff's knowledge of environmental issues shall be high.

Environmental research and development within our business area shall be stimulated.

We shall be a leading process contracting company in respect of the environment.
