

FAST AND FLEXIBLE SERVICE

Läckeby offers service, maintenance, renovation and rebuilding of water and wastewater treatment works, pumping stations, etc. The service covers both planned and regular maintenance as well as a rapid response to stoppages, breakdowns, fires and suchlike.

Läckeby has offered service to Swedish customers since 1935. The service concept, which ensures operational reliability and economical operation, is based on close proximity to customers, years of local experience and extensive knowledge on current plants. We have been involved in the construction of many of the plants, and are almost as familiar with other plants as the people who work there. As a part of Läckeby Water Group, we can also offer the added value that stems from the exchange of experience between plants.

In order to ensure optimal operational reliability at the lowest possible cost, Läckeby offers a running service agreement with a price ceiling. We participate together with your own engineering staff to develop more cost-effective solutions to old and new problems. Läckeby can also provide technical support and draw up adapted solutions to improve the economical running of existing plants. In addition to planned work, we also carry out acute service measures in the case of breakdowns and stoppages, whatever the cause.

The service business is characterised by experienced technicians, well-equipped service vehicles and a high level of preparedness. Our service technicians are also supported by an expert technical team.

Selected customers:

- Borgholm Municipality
- Halmstad Municipality
- Håbo Municipality
- Kalmar Municipality
- Kristianstad Municipality
- NSR
- Strängnäs Municipality
- Syvab
- Trosa Municipality
- VA-Ingenjörerna
- Veolia Water AB
- Vetlanda Municipality
- WSP
- Värmdö Municipality

Läckeby is a part of the Läckeby Water Group, an independent, privately-owned Swedish group, which offers contracting, products and servicing for water treatment and biogas production. We are established on three continents and have to date completed contracts in 67 countries worldwide.

With sales of around USD 70 million, Läckeby Water Group is a leading company in its field.

Decades of cooperation

Läckeby has cooperated with Nybro Municipality for almost 30 years and carried out most conceivable measures—both large and small-scale—in their plants.

“Läckeby has built treatment works and waterworks for us, renovated, rebuilt and extended. Today, we engage the company mainly for service assignments, which is also an area in which Läckeby is very reliable. Almost 30 years of cooperation speaks for itself,” says Anders Lindvall, operating engineer at the Överstatorp treatment works in Nybro Municipality.

“Läckeby is a very good company,” he adds, “with staff that possess knowledge, know-how and initiative. They carry out assignments for us on both a running basis and via tenders, and we have only good experiences. Therefore we will probably continue to engage Läckeby in the future—the fact is that they are here on site and working at the moment.”

Acute help

Läckeby was called in when a fire knocked out the entire treatment works in Borgholm on Öland. The assignment: to restart the treatment plant and save the bio-process in the digestion chamber.

“If it had died out or been severely damaged, we would no longer have had any decomposition of our large sludge volumes,” says works manager, Pehr Fredsson. “Starting a new bio-process takes months, perhaps six, and would have created major problems for operations here.”

Läckeby rapidly arranged for a new boiler, which was transported to Borgholm the night after the fire. Five days later, the digestion chamber was operating again.

Läckeby was also assigned to rapidly restart the treatment plant. Over the years the company has carried out machinery installations and service on site and is therefore very familiar with the plant.

“The repair team was quickly on site, and could start tackling the most important problems and restart the vital functions. Little more than a week later, we were up to 75 per cent of the plant's capacity again. Due to these rapid measures the environmental impact was minimised.”
